Registration Deadline: Monday, October 17th

Students – register with your school studio. Your instructor will then register the number of attendees using the link above.

Program Description: The annual Sustainable House Design Charrette allows local students and architects to collaborate in designing a sustainable house. The evening begins with a presentation on the evolution of the “home,” as well as a look at the Department of Energy’s Solar Decathlon. Then, participants will be separated into teams, and allowed to incorporate their ideas into computer modeling software. Finally, teams will present their designs for judging and prizes.
